```
Biological Processes
              positive regulation of transcription of nucleolar large rRNA by RNA polymerase I
                                                              behavioral response to nicotine
                                                          hydrogen sulfide metabolic process
                                                           synaptic transmission, cholinergic
                                       sulfide oxidation, using sulfide:quinone oxidoreductase
                                                       thyroid-stimulating hormone secretion
                                                  synaptic transmission involved in micturition
                                                        hydrogen peroxide catabolic process
                                                                 thyroid hormone generation
                                                        neuromuscular synaptic transmission
                                                           fructose transmembrane transport
                                                              dehydroascorbic acid transport
                                                                         response to nicotine
                                                    long-chain fatty acid biosynthetic process
                                                           glucose transmembrane transport
                                                                 response to oxidative stress
                                                             leukotriene biosynthetic process
                                                           insulin receptor signaling pathway
                             negative regulation of synaptic growth at neuromuscular junction
                                                                response to water deprivation
                                                              chemical synaptic transmission
                                                       specification of proximal tubule identity
                 proximal/distal pattern formation involved in pronephric nephron development
                                                                        glomus development
                                                              methylglyoxal catabolic process
                                                     acetylcholine receptor signaling pathway
                                                                        spermine acetylation
                                                                       putrescine acetylation
                                                           nor-spermidine metabolic process
                                                               cytokinin biosynthetic process
                                                           glucosinolate biosynthetic process
                                                                     nervous system process
                                                    regulation of nurse cell apoptotic process
                                                                 nurse cell apoptotic process
                                                    larval central nervous system remodeling
                     positive regulation of protein insertion into mitochondrial outer membrane
                                                                 histone H3-K23 acetylation
                                                                 histone H3-K14 acetylation
                                                               negative regulation of appetite
                             positive regulation of transforming growth factor beta2 production
                                   positive regulation of cardiac muscle myoblast proliferation
                                                                         response to karrikin
                                                                                 gravitropism
                                                                    basipetal auxin transport
                                                                  lipoxin biosynthetic process
                                                             response to psychosocial stress
                                                             cellular response to nitroglycerin
                                                                 cellular response to diamide
      regulation of adenylate cyclase-activating G protein-coupled receptor signaling pathway
                                                       positive regulation of TORC2 signaling
                                           positive regulation of positive chemotaxis to cAMP
                                        negative regulation of lateral pseudopodium assembly
                                                                        asexual reproduction
                                                                skeletal muscle tissue growth
                                                   regulation of skeletal muscle tissue growth
                                                               ornithine biosynthetic process
                                           negative regulation of epidermal cell differentiation
                                                          endothelial tip cell fate specification
                                                   dorsal trunk growth, open tracheal system
                                                         cerebellar molecular layer formation
                                                                   thyroid hormone transport
                                                              one-carbon metabolic process
                                                                             B cell activation
                                                                regulation of peroxisome size
                                                                      spermidine acetylation
                                              negative regulation of interleukin-10 production
                                                           peroxisome membrane biogenesis
                                                                 hemolysis in other organism
                                  negative regulation of mitochondrial membrane permeability
                                        establishment of protein localization to mitochondrion
                                                              actin cytoskeleton organization
                                                               leukotriene metabolic process
                                                 positive regulation of mRNA polyadenylation
                                           positive regulation of megakaryocyte differentiation
                                   negative regulation of chaperone-mediated protein folding
                                                                  sensory perception of pain
                                                         regulation of programmed cell death
                                                                 oxidation-reduction process
     positive regulation of mitochondrial membrane permeability involved in apoptotic process
                                                  interleukin-18-mediated signaling pathway
                                                                citrulline biosynthetic process
                                                         cellular response to sodium arsenite
             negative regulation of double-strand break repair via nonhomologous end joining
                                      negative regulation of cardiac muscle cell differentiation
                                                                   leucine metabolic process
                                                                   proline metabolic process
                                                          4-hydroxyproline catabolic process
                                                positive regulation of inclusion body assembly
                                                                         chemotaxis to folate
                  Notch signaling pathway involved in arterial endothelial cell fate commitment
                                                                 skin epidermis development
                                                                     mesoderm development
                                                 negative regulation of Wnt signaling pathway
                                             maintenance of protein location in mitochondrion
                                         cellular response to epidermal growth factor stimulus
             positive regulation of proteasomal ubiquitin-dependent protein catabolic process
                                               positive regulation of behavioral fear response
                                                             regulation of cell morphogenesis
                                                                ion transmembrane transport
                                                                 proline biosynthetic process
                                                positive regulation of lipoprotein lipase activity
                                    anatomical structure formation involved in morphogenesis
                                                                 histone H4-K12 acetylation
                                                                         response to hypoxia
                                                cellular response to leukemia inhibitory factor
                                                            response to temperature stimulus
                                                            regulation of membrane potential
                                          cerebellar Purkinje cell layer structural organization
                                                                               amelogenesis
                                                     melanotic encapsulation of foreign target
                                                                                    secretion
                                                                          myofibril assembly
                                                   positive regulation of cellular pH reduction
                                                           hematopoietic stem cell migration
                                                        cerebellar granular layer development
                                                                    proline catabolic process
                                                    positive regulation of microtubule binding
                                                                        response to ischemia
                                                                     Notch signaling pathway
positive regulation of transcription from RNA polymerase II promoter in response to heat stress
                                                         regulation of lipid metabolic process
                                                                putrescine catabolic process
                                         respiratory gaseous exchange by respiratory system
                                                                      programmed cell death
                                                                         mRNA transcription
                                                                           caveola assembly
                                                                        protein ubiquitination
                                                              regulation of female receptivity
                                                                          signal transduction
                                                             cellular response to angiotensin
                                                       proline catabolic process to glutamate
                                                                       lipoxygenase pathway
                                                                      axo-dendritic transport
                                             embryonic process involved in female pregnancy
                                                          polyphosphate-mediated signaling
                                           positive regulation of apoptotic DNA fragmentation
                                                             regulation of fibroblast migration
                                                             cellular response to L-glutamine
                                                                  loop of Henle development
                                                                  regulation of neurogenesis
                                               pore formation in membrane of other organism
                                                                     response to redox state
                                                                               protein repair
                                                             methionyl-tRNA aminoacylation
                                                     sensory perception of chemical stimulus -
                                                      cellular response to hydrogen peroxide
 positive regulation of autophagy of mitochondrion in response to mitochondrial depolarization
                                positive regulation of DNA-binding transcription factor activity
                                                                                                       positive regulation of protein polyubiquitination
                                                                  synaptic vesicle maturation
                                                     glucose 6-phosphate metabolic process
                                                     Golgi vesicle fusion to target membrane
                                                              dopamine biosynthetic process
                                                            cardiolipin acyl-chain remodeling
                                                                 regulation of anion transport
                                     positive regulation of dipeptide transmembrane transport
                                                     angiotensin-activated signaling pathway
                                                               response to hypobaric hypoxia
                                                                 regulation of glucose import
                                                 S-adenosylmethionine biosynthetic process
                                                                     cerebellum development
                                                                     carbon dioxide transport
                                                                                                      phosphatidylethanolamine biosynthetic process
                                                                                                  cognition
                                                                                                      negative regulation of epithelial cell differentiation
                                                                                                      positive regulation of non-motile cilium assembly
                                                                                                  regulation of dopamine secretion
                                                                                                       larval locomotory behavior
                                                                                                       aromatic amino acid transport
                                                                                                      regulation of chloride transport
                                                                                                      negative regulation of Notch signaling pathway
                                                                                                      primitive hemopoiesis
                                                                                                                           -Log10 (pvalue)
