carbohydrate derivative metabolic process carboxylic acid metabolic process carboxylic acid metabolic process catalytic activity cell cycle process cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process multicellular organismal process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of cellular process regulation of reactive oxygen regulation of reactive oxygen regulation of reactive oxygen reproduction reproduction response to nutrient levels response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	interestion between ergonisms
carbohydrate metabolic process carboxylic acid metabolic process catalytic activity cell cycle process cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mustle system process mustle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein maturation protein modification process regulation of biological process regulation of cellular process regulation of reactive oxygen regulation of reactive oxygen regulation of reactive oxygen regulation of reactive oxygen reproductive process response to nitrogen compound response to nitrogen compound response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	biological regulation
carboxylic acid metabolic process catalytic activity cell cycle process cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cellular process cellular process cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process multicellular organismal process nervous system process nervous system process nervous system process nervous peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein localization protein modification process protein modification process regulation of biological process regulation of cellular process regulation of reactive oxygen regulation of reactive oxygen regulation of macromolecule metabolic process response to nitrogen compound response to nitrogen compound response to nutrient levels response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle—mediated transport	carbohydrate derivative metabolic process
catalytic activity cell cycle process cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process multicellular organismal process muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of reactive oxygen regulation of macromolecule metabolic process regulation of reactive oxygen regulation of reactive oxygen regulation of reactive oxygen response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transport vesicle—mediated transport	carbohydrate metabolic process
cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process microtubule-based movement modulation by symbiont of host process multicellular organismal process muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein modification process protein—containing complex assembly regulation of biological process regulation of cellular process regulation of reactive oxygen regulation of reactive oxygen regulation of reactive oxygen reproductive process response to nitrogen compound response to nitrogen compound response to nutrient levels response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	carboxylic acid metabolic process
cell differentiation cell motility cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process muscle system process nervous system process nervous system process nervous system process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of reactive oxygen regulation of transport reproduction reproduction reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transmembrane transport	catalytic activity
cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process multicellular organismal process muscle system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transmembrane transport transmembrane transport	cell cycle process
cellular amino acid metabolic process cellular component organization or biogenesis cellular process cytolysis cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule—based movement modulation by symbiont of host process microtubule—based movement modulation by symbiont of host process multicellular organismal process muscle system process nervous system process nervous system process nervous system process nervous system process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein—containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process response to nitrogen compound response to nitrogen compound response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle—mediated transport	cell differentiation
cellular component organization or biogenesis	cell motility
cellular process	cellular amino acid metabolic process
cytolysis cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process multicellular organismal process muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein localization protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to nitrogen compound response to stimulus response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	cellular component organization or biogenesis
cytoskeleton organization detoxification DNA repair DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to stirouse signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	cellular process
detoxification DNA repair DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen reproduction reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transport vesicle-mediated transport	cytolysis
DNA repair DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process multicellular organismal process multicellular organismal process muscle system process nervous system process nervous system process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein localization protein modification process protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of reactive oxygen reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	cytoskeleton organization
DNA replication DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of reactive oxygen regulation of macromolecule metabolic process regulation of transport reproduction reproductive process response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	detoxification
DNA-templated transcription immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	DNA repair
immune system process intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein modification process protein—containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	DNA replication
intracellular protein transport lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nervous system process nervous organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	DNA-templated transcription
lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	immune system process
lipid metabolic process microtubule-based movement modulation by symbiont of host process mRNA metabolic process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	intracellular protein transport
microtubule-based movement modulation by symbiont of host process mRNA metabolic process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
modulation by symbiont of host process mRNA metabolic process multicellular organismal process muscle system process nervous system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein–containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
mRNA metabolic process multicellular organismal process muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein–containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
multicellular organismal process muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproduction reproductive process response to nitrogen compound response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
muscle system process nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein–containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
nervous system process nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein–containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle–mediated transport	_
nitrogen compound metabolic process peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
peroxisome organization positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of transport reproduction reproductive process response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
positive regulation of phospholipase activity programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
programmed cell death protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
protein catabolic process protein folding protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
protein folding protein localization protein maturation protein modification process protein—containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle—mediated transport	
protein localization protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	-
protein maturation protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
protein modification process protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	-
protein-containing complex assembly regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of biological process regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of cellular process regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of lipid storage regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of macromolecule metabolic process regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of reactive oxygen regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
regulation of transport reproduction reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
reproductive process response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport vesicle-mediated transport	
response to nitrogen compound response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
response to nutrient levels response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
response to stimulus response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
response to stress signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
signaling sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
sulfur compound metabolic process telomere organization transmembrane transport transport vesicle-mediated transport	
telomere organization transmembrane transport transport vesicle-mediated transport	
transmembrane transport transport vesicle-mediated transport	
transport vesicle-mediated transport	
vesicle-mediated transport
